Bachelor of Science in Computer Science

Atlanta, GA

I believe I am a strong candidate for the **Junior Software Developer** position at BAE Systems. With my background in full-stack development, experience in cloud-based technologies, and active Secret clearance, I am well-equipped to contribute to the development of advanced electronics that protect those who protect us.

My academic and project experiences have equipped me with a robust foundation in several key areas relevant to the responsibilities of this role:

- **Developing and deploying a microservices-based** music streaming application using Microsoft Azure services and deployed with CI/CD pipelines.
- **Designing and implementing a secure backed API** for an e-commerce platform allowed me to delve into the intricacies of authentication, authorization, data protection, and unit testing.
- **Implementing a CI/CD pipeline** using Azure Pipelines, showcasing my understanding of automation and deployment processes.
- **Collaborating on a comprehensive Cloud Security Policy** for a financial institution, ensuring compliance with industry standards and government regulations.

I am eager to join the BAE Systems team and contribute to the development of cutting-edge technologies that safeguard our nation's defense.

Sincerely,

Matthew Jinks
